

Got Sign Numbers?

Confused by Ops outage reports?

There is nothing more **frustrating** than a vague location description of a fixture that needs attention.

Accurate reference numbers eliminate confusion. Establish a sign numbering system that includes mounting high visibility numbers on each sign.

Does your inspection list look like this?

"...Which sign is out?"

Lumacurve's Sign Management Program

Sign Numbering 101:

Creating a Sign Numbering System (Easy as 1, 2, 3!)

This system facilitates accurate reporting for outages and maintenance. Each sign must have its own unique number.

- 1.) Post a reference map of the airfield with numbered sign locations.
- 2.) Create a record sheet for each sign & assign a ID number.
- 3.) Log maintenance & repairs on the signs' record sheet.
- 4.) Keep the sign records in your maintenance library.
